

# 'clean between' to maintain patient safety

Approximately one in 20 patients who come into hospital or another healthcare facility acquire an infection. At best these infections go on to cause patients short lived symptoms of pain and discomfort, at worst death.

Many of these infections can be prevented. Cleaning and disinfection of shared patient equipment between each use is an essential element of an effective infection prevention and control programme.

clean  
between

**Clean shared equipment between each use**

Please ensure that you follow the manufacturer's guidelines.
